

Electric Heaters for Cleaning Systems

heatsystems has developed a special heating element for use in cleaning systems suitable for pharmaceuticals. It meets all the requirements for a heating element for a pharmaceuticals machine:

- dead-leg-free version
- roughness depth of wetted parts
Ra <0.8 µm or less
- roughness depth measuring report
- electro polished version
- wetted parts with material certificates according to EN 10204-3.1
- heater wired ready to connect plug
- built-in temperature sensor as temperature limiter with detachable connection, for simplified assembly

Because of the special design features of this heating element, almost all the customers' demands for an increased performance can be met.
